

Bramal LED letter of recommendation**Dear prospective Bramal LED customer,**

We at Technostrobe recently took delivery of, and installed, Bramal LED's innovative LED retrofit lamps and fixtures. Being a manufacturer of LED products we were keen to use a local LED company with innovative technology when undertaking our recent renovation.

We chose Bramal LED from among some more established names in lighting due to their reputation for quality and customer service.

The Bramal LED product lifetime rating of 80,000 hours and the flexibility of installation were also key to our decisions as was working with a North American based company.

Our project required the addition of new fixtures in a recently modified space within our building. We had an extremely short timeframe in which to procure the lamps and fixtures as well as complete installation in order to minimise disruption of our own manufacturing process.

Bramal LED was able to supply us with the fixture solution we required on the same day as our order was placed. This was done quickly and efficiently from their warehouse in Lachine

This quick reaction was another keys for choosing Bramal LED rather than a more "established" brand name and the service level has continued to impress us. Technical questions were answered swiftly and additional fixtures supplied quickly as we realised some additional needs.

We would not hesitate in recommending Bramal LED as the go to company for industrial and commercial LED retrofit requirements.

Please do not hesitate to contact us directly for further feedback and if you are in Montreal region we would be open to showing you our facility and the Bramal LED product in action

Guy Buisson Eng. CEO
